AutoCAD X64 [Latest]

Multiuser AutoCAD environments AutoCAD LT, AutoCAD 2009, AutoCAD 2010, AutoCAD 2011, AutoCAD 2012, AutoCAD LT for Windows, AutoCAD Standard, AutoCAD WS, AutoCAD LT for Mac, AutoCAD LT for Windows, AutoCAD Architecture and AutoCAD Mechanical all have multiuser capabilities, although some of the more recent AutoCAD products are now deployed on a network rather than through a local user account. These desktop-based AutoCAD products can be deployed in an office or at home. AutoCAD LT and AutoCAD LT for Windows will run on a single machine; AutoCAD Architecture, AutoCAD LT for Mac and AutoCAD LT for Windows require a server or separate client installation. Two technologies are used to allow multiple users to edit the same drawings on a single computer. The first is a local shared data network. This allows drawings to be shared between users without the need for installing a new AutoCAD version. The second is Local Workspace. Local Workspace is used to allow a single user to have access to the same drawing as others, without sharing the drawing. AutoCAD LT and AutoCAD Architect both have the ability to have several users working simultaneously on a drawing. With these two products, multiple users can work on a drawing at the same time. Users can see the same information as the other users, but they are not allowed to make changes to the drawing. Other users can add to the drawing, however, as they are modifying the same drawing. If a change is made to the drawing, all users will see the change. One of the biggest advantages to this setup is that users can continue to work on the same drawing, without other users interfering with their work. AutoCAD LT does not have a concept of "users" working on the same drawing at the same time. When multiple users attempt to access the same drawing, they will not see the same drawing, but will see a different drawing. If one user makes a change to a drawing, all users will see that change. To have a single user with multiple accounts access the same drawing, it is necessary to have a server installed. This server will not allow multiple users to work on the same drawing at the same time. Instead, the server will allow a single user to work on the drawing, and others will a1d647c40b

What's New In AutoCAD?

Pit-sequence feature for creating alignments between disparate drawings. Enables you to set up automatic alignment of drawings based on a sequence of 2D snap/click events, just by dragging points between drawings. (video: 2:30 min.) Applying properties, including scales and extents, is now more intuitive. Properties are applied in a new "applying properties" screen. (video: 4:10 min.) New defaults: Local Wireframe By default, AutoCAD will be configured for using local wireframe for models with holes, and will treat models with solid faces as wireframes by default. New commands have been added to assist with this: Left click on model with local wireframe for holes will temporarily change model to solid faces. Right click on model with local wireframe for holes will revert model back to having holes. Line color for polyline (regardless of face style) can be changed by right clicking on the line and choosing "Edit Line Color" from the options that appear. A polyline on top of a circle will now be visible. When right clicking on a polyline and selecting "Edit Polyline To Display" from the menu that appears, a dialog will ask you if you want to display the polyline or display it as a "hidden line." It is now possible to edit the options for display of individual components when right-clicking on model components. Cursor: Moves the cursor away from the center of the screen. (video: 2:50 min.) Middle-click (2nd click) on line segments of polylines can now be used to switch between the "tighten" and "loosen" axis. Staying on Layer: There is now a feature that when you are in the context of the active layer, (usually the current view layer) toggling the layer stickness, or "staying on layer" setting will keep you on that layer. In the new Drawing Properties editor (an expanded version of the drawing toolbar), you can click the down-arrow next to the Staying On Layer toggle. (video: 1:25 min.) Miscellaneous: New Dynamic Locator control option: Select this to switch between "world space"
