Can someone point me to a software that will do this: Have preloaded info from TurboTax If a new tax form is created I will upload it Generate a payroll summary report

TurboTax is giving me the creeps - always make me say: Damn! It's not working! A: I have not used it, but I do recall TurboTax having a Payroll Suite. Perhaps that would be an option. Q: Is there a simple way to exclude a single list item? I would like to make sure an IEnumerable is excluded from the scope of a function. Is there a simple syntax like List.Exclude(x=>x==1234), or do I have to do the following?

DataGridView? I am new in .Net and have been trying to implement a Windows Form application by generating/drawing data through .NET. I have 2 problems as follows: 1. I need to draw the Border for Multiple cells of the same DataGridView but the problem is when I use the following code it only works for one cell and the other cells are blank. `dataGridView1.ColumnHeadersBorderStyle =`

`DataGridViewCellBorderStyle.Single;` 2. If I use the following code, I get a red border for all the cells:

`dataGridView1.ColumnHeadersBorderStyle = DataGridViewCellBorderStyle.Single | DataGridViewCellBorderStyle.Thick;` Code to draw DataGridView: `dataGridView1.CellFormatting += dataGridView1_CellFormatting;` `dataGridView1.CellValidating +=`

`dataGridView1_CellValidating;` `dataGridView1.CellMouseEnter += dataGridView1_CellMouseEnter;`

`dataGridView1.CellMouseLeave += dataGridView1_CellMouseLeave;` `dataGridView1.ColumnHeadersBorderStyle =`

`DataGridViewCellBorderStyle.Single | DataGridViewCellBorderStyle.Thick;` The border I am trying to draw is generated/rendered through the following code: `dataGridView1.RenderCell(dataGridView1.Rows[j], i + 1, dataGridView1.ColumnCount, new`

`Rectangle(new Point(0, 0), new Size(cellSize.Width, cellSize.Height));` Code for drawing the border in the Cells: `private void`

`dataGridView1_CellFormatting(object sender, DataGridViewCellFormattingEvent e)`

What's New In?

A new guide helps you edit existing text strings (video: 8:00 min). When creating new drawings, you can now choose to import a template (video: 7:00 min). AutoCAD Graphics Processor (AutoCAD GPU) (video: 1:00 min): Uses 4x to 5x more graphics processing power for faster rendering and faster execution of geometry-based commands. Vertical and Horizontal Guide Tools (video: 1:00 min): These tools allow you to create guides that guide your drawing. You can quickly create guides of any size and type, for editing, orientation, and more. Align Drawing Objects to a Drawing Using Cross-References (video: 2:00 min): Drawing objects can be aligned to existing objects using cross-references in the same drawing or in a different drawing. Composite Views: Add, edit, and delete overlapping objects in a drawing by using the background layer view, which is similar to the way you view and edit overlapping objects in a photograph. (video: 2:15 min.) Cross-Referencing: This new feature allows you to link objects in your drawings and other drawings. This makes it easy to work with images, shapes, and other drawings as if they were linked together. (video: 2:30 min.) Tables, Graphs, and Charts: You can now create tables, graphs, and charts with AutoCAD and easily see and modify them in different views. Data Management: You can now organize your drawings and edit them from any location using Microsoft Windows Explorer. Chart Book Editor: You can now create and edit charts in AutoCAD, without using an external program. CADRendering: You can use new display modes that allow you to quickly see your rendering previews in your drawings. Work Management: You can now create and modify multiple projects without having to use different layouts, tasks, and documents. Function Keys: A function key on the left of your keyboard now allows you to access an option for one function, such as a menu option. User Interface (UI) Customization: You can customize the UI in
