OST File Converter is an easy-to-use and efficient utility that offers an easy and fast way to convert

OST files to different formats. Q: Strategy to create two distinct views on one (large) table I have a single table with a column of question IDs. The idea is that each question may have multiple different versions (for some reason, let's say that a question might have varying levels of difficulty - i.e. by definition, some questions are easier than others, so some may be suitable for a 5-year-old child and some not, etc.) I want to create two separate views based on the question ID: one view for the questions that are suitable for a 5-year-old child and another view for those that are suitable for a more mature audience. The query that I've come up with so far is: `SELECT * FROM Questions WHERE ID = @questionID AND (CAST(@age AS CHAR) = '5')` I feel like this

is going to be horribly inefficient as there are likely to be many thousands of rows that I will never need to display. I'm thinking of dropping some of the columns, creating two separate views and then linking the two views in my main view but would like to know if there's a way to create a single view that I can split into two views using something like the above query? A: SQL Server has support for computed columns. You can create two views, on which you can apply your conditions and get desired output. You can find more about this on MSDN. Then you can create computed column on that view which can select the columns and conditions in the main table. `CREATE VIEW Child_View AS SELECT * FROM Questions WHERE id =`

@questionID AND CAST(@age AS CHAR) = '5'
CREATE VIEW Mature_View AS SELECT *
FROM Questions WHERE id = @questionID AND
CAST(@age AS CHAR) = '5' Then define a computed
column on the Mature_View view and select the
columns and condition from Child_View view. If the
publisher of the Italian house of any other label were
to release a record with the same result and quality, it
would be a roaring success. Against all odds, though,
the Church is one step ahead. More or less "played

political and social rather than a musical
phenomenon. Pope Francis however, is not only
capable of producing a good concert on his own, but
has done so on several previous occasions. The Irish

priest had the courage to present a musical composition in the second largest hall of the Vatican. It is a hymn to the Most High, composed in 1996 by the renowned German guitarist, (K
