Registry Tweaker Product Key X64 Latest

Registry Tweaker is a software that can help you configure your Windows registry entries in a simple method. The interface of the program is plain and simple. So, you can disable all access to Control Panel and the ability to open the context menu on the desktop, as well as add encryption to the right-click menu. Furthermore, you can hide and disable all access to taskbar settings, enable to search all file types, increase the USB polling interval and load balance network adapters. But you can also manage the native processor performance control, change the screen saver grace period, clear the pagefile on shutdown, disable "Folder Options" from the Explorer "Tools" menu, configure the driver signing behavior, and more. In addition, you can use a profile manager, tweak tracker, Internet Explorer security tool (e.g. block domains, cookies and ActiveX) and backup your registry keys (whole registry, hive backup, custom registry key). Moreover, you can configure registry entries which automatically run at system startup, view system information, convert a profile to REG, use a REG syntax checker, change the Windows XP key, and others. In the "Settings" menu, you can set the tool to automatically run at Windows startup, to minimize to system tray and to automatically check for updates online, specify the database and tracker paths, and more. The program takes up a low-to-moderate quantity of system resources and didn't freeze or crash during our tests. You cannot access a user documentation page and an error popped up when we accessed "System Information Tool". Otherwise, we strongly recommend Registry Tweaker to all users.
